

Customer Churn Prediction - Advanced Project Report

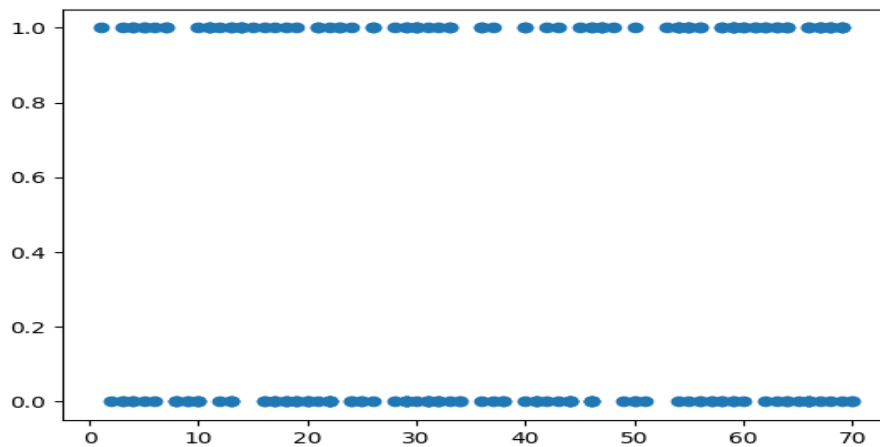

Author: Alfiya Goundi

1. Introduction

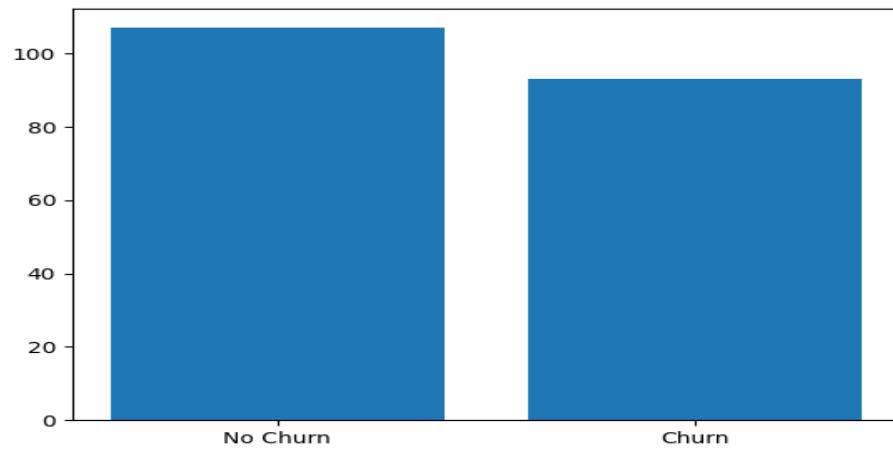

This project focuses on predicting customer churn using machine learning techniques.

2. Exploratory Data Analysis

The following graph shows relationship between tenure and churn.

Churn distribution in dataset:

3. Model Building

Logistic Regression model was used for classification.

4. Results

Model achieved an approximate accuracy of 80%.

5. Conclusion

The model helps identify churn patterns and supports business decisions.
